1 INTRODUCTION

The 2023/24 edition of *European Vehicle Market Statistics* offers a statistical portrait of the passenger car, light commercial, and heavy-duty vehicle fleets in the European Union (EU) from 2001 to 2022. As in previous editions, the emphasis is on vehicle technologies, fuel consumption, and emissions of greenhouse gases and other air pollutants.

The following pages give a concise overview of data in subsequent chapters and summarize the latest regulatory developments in the EU. More comprehensive tables are included in the annex, along with information on sources.

Number of vehicles

The vehicle market in 2022 was characterized by a continued drop in total new car registrations in the EU, stemming from the outbreak of the COVID-19 pandemic in early 2020 and prolonged by supply chain issues and the war in Ukraine. About 9.3 million new cars were registered in the 27 Member States in 2022, about 5% less than the previous year and 29% less than the market peak in 2019. Vehicle sales stagnated in nearly all segments, with two exceptions: the luxury segment, where sales rose 63% compared to 2021, and the mini segment, where registrations dropped 23% compared to 2021. The SUV segment continued to consolidate its position as the market leader, making up 47% of new registrations in 2022, followed by the Lower Medium segment (19%).

Although new registrations of plug-in hybrid and battery electric passenger cars in the EU have soared in recent years, reaching 18% of total registrations in 2021 and 22% in 2022, the market may be leveling off, as a slight drop to 20% occurred in first half of 2023 (**Fig. 1-1**). The slowing demand can likely be attributed to higher inflation, as well as national and local policies such as the phaseout of purchase subsidies in Germany. China's electric

vehicle market started to develop shortly after the EU's and has since surpassed the EU market share, doubling from 2021 to mid-2023 and reaching nearly 32%. The trend in China has been primarily driven by national pilot programs, incentives, and regulations, in particular the new energy vehicle (NEV) mandate for car manufacturers. Meanwhile, the EV market in the United States has been steadily expanding, increasing 52% in 2022 over 2021 and another 25% in the first half of 2023. The share of PHEVs is notably smaller in the United States, comprising just 19% of new EVs, compared to a 34% share in Europe. The EV market in India is still in its early stages, totaling just over 2% of new vehicles by mid-2023. This is nevertheless an 82% increase over the end of 2022, suggesting that a boom may be on the horizon.

Light duty electric vehicle market share and size, 2021-H1 2023 (%)

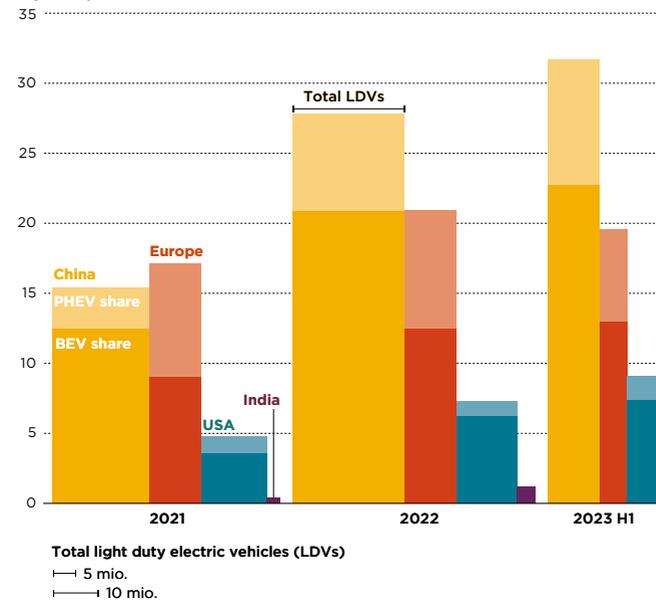

Fig. 1-1

Share of battery electric and plug-in hybrid vehicle models among all new light duty vehicle registrations in Europe, China, the United States, and India

Data for China and the United States is taken from Marklines. Data for Europe is taken from the European Environmental Agency (EEA) and Dataforce. Data for China and Europe only includes passenger cars, while data for the United States also includes light trucks.

Fuel consumption and CO₂ emissions

The official level of average CO₂ emissions from new passenger cars registered in the EU, as measured in the laboratory via the Worldwide Harmonized Light Vehicles Test Procedure (WLTP), decreased to 110 g/km in 2022, which is roughly 6 g/km lower than in 2021. For the European Economic Area, the average value in 2022 was 108 g/km.

After the introduction of the 2015 targets, and in the absence of more stringent targets before 2020, average CO₂ emissions increased by 0.7 g/km per year up to 2019. With the introduction of the fleet-average CO₂ target of 95 g/km in 2020, new car emission levels fell at the unprecedented rate of more than 1 g/km per month in 2020/21. However, since 2022, this rate of CO₂ reduction has slowed. According to preliminary data published by the European Environment Agency (EEA), all manufacturing groups nevertheless complied with their respective 2022 CO₂ targets.

New mandatory CO₂ standards for the years 2025 and 2030 were adopted in early 2019 (Mock, 2019) and revised in March 2023 (Dornoff, 2023). Fleet-average emission reduction targets are -15% for passenger cars and vans by 2025, -55% for new passenger cars and -50% for new vans by 2030, and -100% by 2035 for cars and vans, all relative to a 2021 baseline. Compliance with CO₂ emission targets will be measured using the WLTP test procedure, which became mandatory for new vehicles in September 2018.

For new heavy-duty vehicles, the current CO₂ standards from 2019 set a 15% emissions reduction target by 2025, or 2.5% per year, and a 30% reduction by 2030, relative to a 2019 baseline (European Commission, 2019). A proposal by the European Commission from February 2023 would extend and strengthen these CO₂ target levels to -45% in 2030, -65% in 2035 and -90% in 2040. It is expected that revised CO₂ standards for new trucks and buses will be finalized in early-2024.

The long-haul tractor trailer segment makes up 61% of the total truck market in the EU. CO₂ emissions for this segment dropped an average of 1% in 2021 over 2020, falling short of the annual 2.5% reduction target. When looking at manufacturers, MAN and Volvo showed the greatest improvement in CO₂ emissions from 2019 to 2021, becoming two of the lowest emitting manufacturers. The highest emitting manufacturer was Ford, which was the only manufacturer whose CO₂ emissions increased over the previous year (+2.3%). Despite achieving relatively little improvement in 2021, Scania remains the lowest emitting manufacturer of long-haul tractor trailers, largely due to their superior air drag performance (Ragon & Rodriguez, 2021) (**Fig. 1-2**).

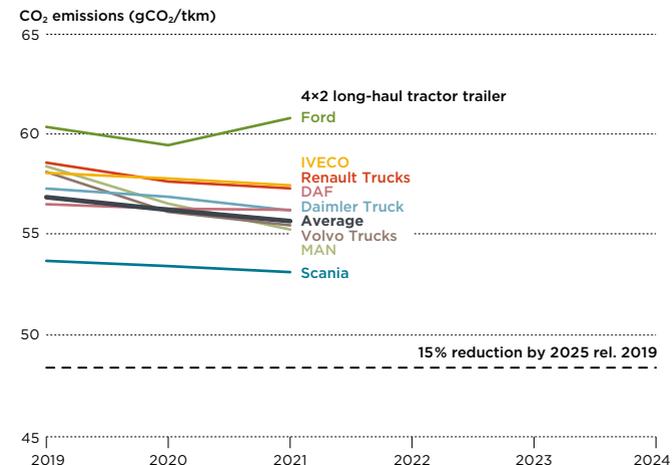

Fig. 1-2

Fleet average CO₂ emissions for the 4x2 long-haul tractor trailer segment for EU truck manufacturers, 2019-2021

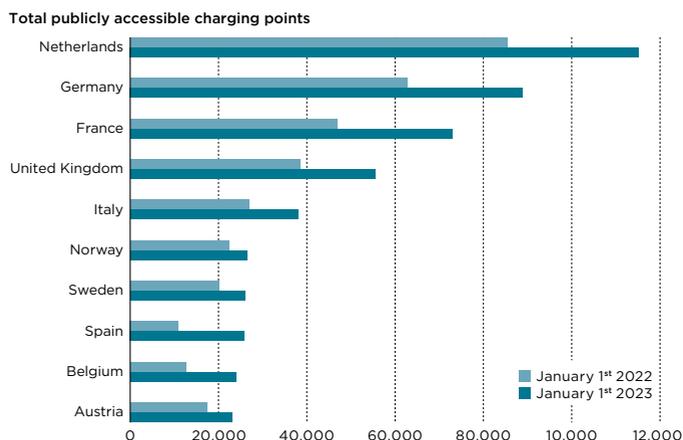

Technologies and key technical parameters

Although the vast majority of Europe's new cars continue to be powered by gasoline or diesel engines, the share of alternative power trains is steadily increasing. Battery-electric vehicles (BEVs) accounted for 12% of all new car sales in 2022, while plug-in hybrid vehicles (PHEVs) made up about 10% of the market.

BEVs were the most popular in Sweden in 2022, where 35% of new car sales were battery electric, followed by the Netherlands with a BEV share of 24%, up from 20% in 2021. Sweden was also the leading market for PHEVs, where they made up 23% of new sales. The success of electric vehicles in the Netherlands can be partially attributed to the extensive charging infrastructure network in the country, with over 115,000 publicly accessible charging points at the start of 2023, 30% more than Germany despite having only a fifth of the number of passenger cars on the road (Fig. 1-3).

Fig. 1-3

Total publicly accessible charging points installed, by country, 2022-2023

Of the largest brands, Volvo (37%) had the highest market share of PHEVs in 2022, followed by Mercedes-Benz (24%) and BMW (21%). Volvo also led in BEV market share, with 21% of sales being battery electric in 2022, followed by Fiat (18%) and Renault (16%).

In 2022, the average mass of new cars in the EU increased to 1,518 kg, 19% above the 2001 level. The average mass of the Swedish new car fleet was, at 1,788 kg, well above the EU average and above other relatively heavy EU fleets, such as Germany, where the average was 1,631 kg. In contrast, customers in Italy

and France opted for significantly lighter cars, with an average weight of 1,387 kg and 1,415 kg, respectively. The average engine power was 109 kW in 2021, which is about 47% more than in 2001.

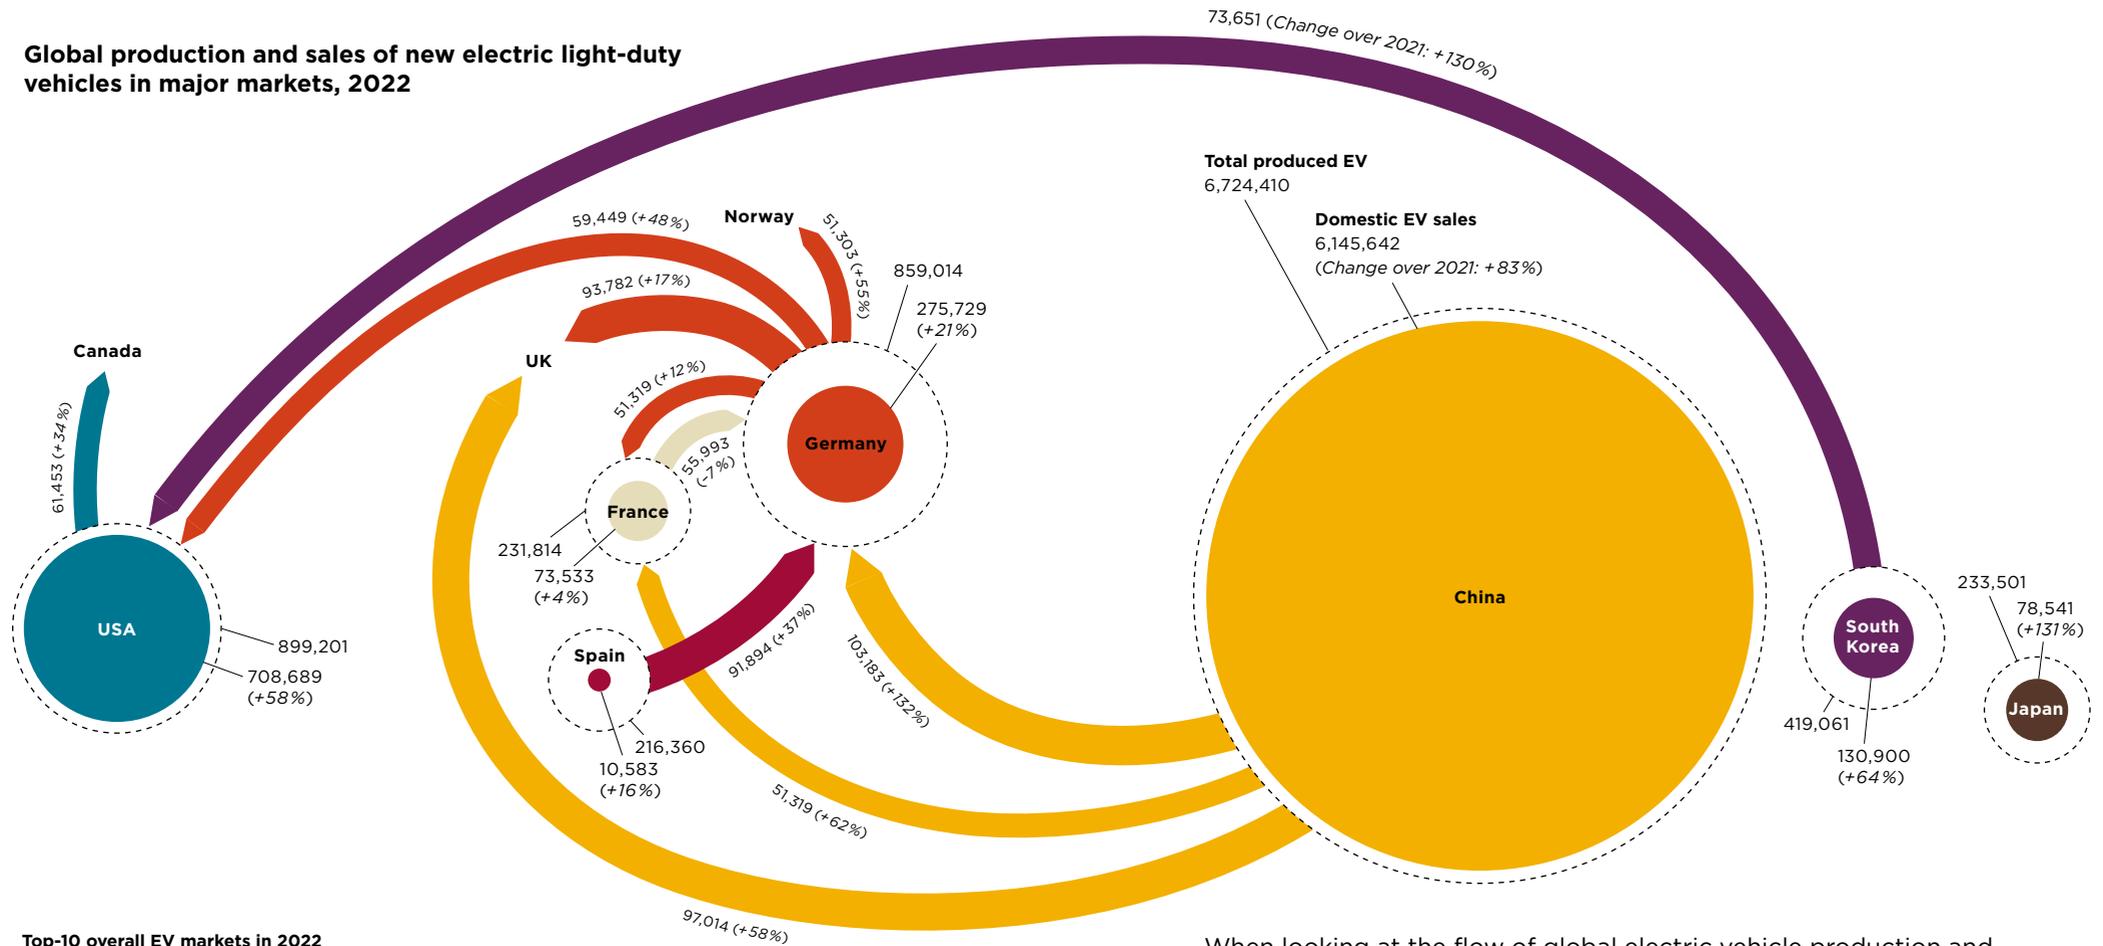

Other emissions and on-road

The Real Driving Emissions (RDE) test procedure was phased-in beginning in 2017 for new vehicle types and is required for all new vehicles as of September 2019. As part of the RDE test, conformity factors were introduced that regulate how much higher vehicle emissions are allowed to be during on-road testing than during laboratory testing. For nitrogen oxides (NO_x), the conformity factor was 2.1 for the initial phase starting in 2017 (Euro 6d-Temp standard) and 1.43 from 2020 onward (Euro 6d standard). As of January 2021, all new vehicle registrations must be Euro 6d compliant. The subsequent Euro 6e standard is in effect since September 2023 for new vehicle types and will apply one year later for all newly registered vehicles. A proposal for the Euro 7 standard, which will likely be the last step before the phase-out of combustion engine vehicles, is expected to be adopted by the European Commission in early-2024.

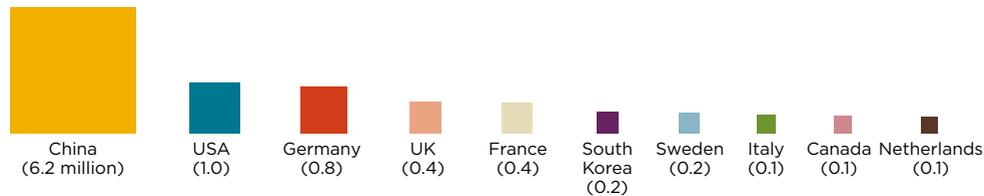

The light-duty vehicle CO₂ regulation adopted in 2019 requires the European Commission to monitor the on-road fuel and electric energy consumption of passenger cars and vans to prevent growth in the gap between type-approval and real-world CO₂ emissions. Since 2021, to collect the necessary monitoring data, manufacturers are required to install on-board fuel and energy consumption monitoring devices (OBFCMs) in new vehicles. The Commission was tasked to assess how OBFCM data may be used to ensure that type-approval CO₂ emissions remain representative of real-world CO₂ emissions. By the end of 2026, the Commission will also assess the feasibility of a mechanism that prevents the gap from growing by adjusting each manufacturer’s annual CO₂ emission performance, applying from 2030.

2 NUMBER OF VEHICLES

Global production and sales of new electric light-duty vehicles in major markets, 2022

Top-10 overall EV markets in 2022

Electric vehicles = battery electric (BEVs), plug-in hybrid electric (PHEVs), and hydrogen fuel cell electric (FCEVs)
Data source: EV Data Center, EV Volumes, 2023, <http://www.ev-volumes.com/datacenter>

When looking at the flow of global electric vehicle production and sales, China and the United States are the largest producing countries, also standing out in their dominant sales to their home markets, with a respective 91% and 79% of EVs produced sold in the country. In contrast, the third largest producer, Germany, only sells 32% of its EVs domestically. Likewise, South Korea (31% domestic sales), Japan (34%), France (32%), and Spain (5%) export the majority of electric vehicles produced. In terms of sales, after China, the US and Germany, the UK is the fourth largest vehicle market for electric vehicles. With limited domestic production, it imports 92% of its new EVs.

About 9.3 million new cars were registered in the EU in 2022, continuing a downward trend from the most recent peak of over 13 million in 2019. Registrations in Europe are dominated by the larger countries; the three largest alone – Germany, France, and Italy – accounted for 59% of the total (**Fig. 2-1**).

Germany is the largest vehicle market, currently with a 28% share of the total EU market. Since reaching a peak of around 3.6 million vehicles in 2019, registrations fell sharply after the outbreak of the coronavirus to 2.5 million in 2021. Germany saw a slight increase of less than one percentage point in 2022. While new registrations in Italy, Spain and the Netherlands have fallen to between 50% and 60% of their 2001 levels, Sweden was the only country with new registrations surpassing 2001 levels in 2022, despite a drop following the pandemic (+15%) (**Fig. 2-2**).

New car registrations in the luxury segment were 63% higher in 2022 than in the previous year, while all other segments remained largely unchanged. The SUV segment increased its market share slightly to 47% (up from 43% in 2021), and the Mini segment dropped minimally to just under 6%. About 4.2 million new cars in 2022 were SUVs, over nine times as many as in 2001 (**Fig. 2-3, Fig. 2-4**).

In 2022, the Toyota Yaris became the most popular car model in Europe, accounting for about 2.9% of all new vehicle sales. Among the largest manufacturers, only Audi and Mercedes-Benz saw increased registrations, up roughly 5% each compared to 2021 (**Fig. 2-6**).

There were almost 330,000 new registrations of heavy trucks and buses in the EU in 2022 (**Fig. 2-12**). Volkswagen notably lost 5% of its market share for regulated trucks over 7.5 t, and 13% for unregulated trucks, while Volvo lost 5% of its market share for unregulated trucks in 2022 compared to the previous year. Other manufacturers filled in this gap, making up 19% of the new registrations of unregulated trucks in 2022, up from a 1% share in 2021 (**Fig. 2-15**).

While in reality many brands are part of a larger group (for example VW, Audi, Škoda, Seat and others are part of the Volkswagen Group), for this report, each of the brands are shown individually. The reason for this is that brand affiliations have changed in the past (as for example in the case of Daimler and Chrysler) and may change in the future.

3 FUEL CONSUMPTION & CO₂

Annual change in average vehicle mass and type-approval* CO₂ emission level for new passenger car registrations in the EU, 2002-2022

*CO₂ emission levels are converted to NEDC for all years

Average mass and CO₂ of new passenger car registrations in the EU, 2022

Within the past 20 years, the average type-approval CO₂ emission level of new passenger cars in Europe decreased by about half. In 2020 and 2021, more than half of the large drop in CO₂ emissions could be attributed to new BEVs. In 2022, BEVs accounted almost entirely for the decrease in CO₂ emissions. At the same time, the increased market share of BEVs has contributed to the trend towards heavier vehicles in recent years. This is because BEVs tend to be heavier than combustion engine vehicles, largely due to heavy battery packs.

The average CO₂ emissions of newly registered cars in the EU-27 was roughly 110 g/km in 2022, down from 116 g/km in 2021 (**Fig. 3-1**). For the entire EEA, the CO₂ level in 2022 was 108 g/km.

Fleet-wide average CO₂ emission levels vary widely among Member States, with Germany at a level of 106 g/km and Sweden at 68 g/km in 2022 (**Fig. 3-3**). Only Spain and Italy exceeded the 2022 average WLTP CO₂ emissions target of 119 g/km. In contrast, average CO₂ emissions in Sweden and the Netherlands have already fallen well below the WLTP target for 2025.

In 2022, manufacturers were required to meet an average CO₂ target of 119 g/km, with individual targets dependent on the average vehicle mass of a manufacturer's fleet. Tesla (0 g/km) had the lowest fleet average CO₂ emission levels of brands sold in the EU-27 in 2022. On the other end of the spectrum, Audi (124 g/km, in WLTP terms) had one of the highest emission levels among the major manufacturers (**Fig. 3-4**).

While average CO₂ emission levels for new cars, according to the official test procedure, have decreased by about 55% since 2001, vehicle weight has increased by 19% and engine power has increased by 47% (**Fig. 3-6**).

4 TECHNOLOGIES & KEY PARAMETERS

Public electric vehicle charging infrastructure in China, Europe, and the United States

Total publicly accessible chargers

Number of EVs per charging point

Over 560,000 publicly accessible charging points were installed in the EU by mid-2023, a 50 percent increase over the previous year and more than double the total from mid-2021. While expansion in the United States continues to be limited, China is the global leader in charging infrastructure for light-duty vehicles, with nearly 2.15 million publicly accessible charging points by mid-2023. In terms of access, there is one charging point for every 9.4 vehicles in China, compared to 16.6 vehicles in the EU and 20.6 vehicles in the United States. China's infrastructure also stands out in its significant share of fast (DC) charging, making up 42% of public charging points, versus only 14% in the EU and 26% in the United States.

Data sources: China Electric Vehicle Charging Infrastructure Promotion Alliance (EVCIPA), Eco-movement, PlugShare

The decline of market shares of diesel cars sold in the EU continued in 2022, falling to just 20%, down from 44% in 2017 (**Fig. 4-1**). Diesel shares dropped for all brands in 2022, with the exception of Audi, where the share in the EU-27 remained at roughly 38% (**Fig. 4-6**).

Meanwhile, the market share of HEVs climbed to over 8% in 2022. Sales of HEVs were particularly strong in Finland, where they reached an 18% share in 2022, followed by Ireland (17%) (**Fig. 4-2**). The hybrid electric market continues to be dominated by Toyota, which made up 73% of HEV registrations in 2022 (**Fig. 4-7**).

BEVs accounted for 12% (+3 percentage points from 2021) of all new car sales in the EU-27 in 2022, and PHEVs made up another 9%. Sales of PHEVs were particularly high in Sweden, Finland, and Denmark, although shares in each of the countries fell compared to the previous year, dropping between 1 and 4 percentage points. The Volvo brand continued to have to highest share of PHEVs, with (37% in 2022 (**Fig. 4-3**, **Fig. 4-8**). BEV sales jumped in Sweden to 34% from 19% in the previous year. Looking at the largest manufacturers, Fiat (17%) and Renault (16%) sold the highest shares of BEVs in 2022 (**Fig. 4-4**, **Fig. 4-9**). For light commercial vehicles, the EU market share of BEVs increased 67% over 2021 (**Fig. 4-12**).

The average engine power of new passenger cars in the EU also increased to 109 kW in 2022, which is 47% more than in 2001. Vehicles in Sweden and Germany, with average engine power values of 130 kW and 150 kW, respectively, were also the heaviest, at an average of 1,787 kg and 1631 kg, respectively. In contrast, Italy's vehicles had an average engine power of 88 kW and weight of 1,387 kg (**Fig. 4-13**, **Fig. 4-16**).

5 ON-ROAD & OTHER EMISSIONS

Passenger car nitrogen oxide (NO_x) emission levels - type-approval limits vs. real-world driving

Remote emission sensing campaigns carried out in three European cities under the CARES project between 2021 and 2022 revealed that average real-world vehicle nitrogen oxides (NO_x) emissions decreased with the introduction of the Pre-RDE Euro 6 standard, dropping from 0.7 g/km to 0.3 g/km for diesel vehicles. However, vehicle emissions continue to exceed type-approval limits, with measurements from the campaigns for both Euro 5 and pre-RDE Euro 6 standards averaging nearly 4 times the respective limit values. Euro 5 diesel vehicles tended to exhibit more extreme measurements, with emissions from some manufacturers between 7 and 8 times the type-approval limit. In contrast, emissions of petrol vehicles were found to generally be closer to the type-approval limits.

Average real-world NO_x emissions for major manufacturing groups by fuel type compared to Euro 5 and pre-RDE Euro 6 emissions standards
 Data sources: Real world emissions measured during the CARES remote sensing campaigns in Prague, Milan, and Krakow, <https://cares-project.eu>

Since September 2014, pre RDE-Euro 6 emission limits applied to new-vehicle type-approvals, and have been mandatory for all new-vehicle sales since September 2015 (**Tab. 5-1**). The RDE on-road test procedure, introduced in two steps over a multi-year period beginning in September 2017, applies not-to-exceed (NTE) emission limits for NO_x and particulates (**Tab. 5-2**). Temporary NTE limits were applied during the first RDE stage, which corresponds to the Euro 6d-temp standard, while the final, more stringent limits are mandatory for all new-vehicle type-approvals since the phase-in of the second stage (Euro 6d) in January 2020. From September 2023 onwards, the Euro 6e regulation is in effect and the conformity factor has been replaced by a 'PEMS margin' at a level of 1.1 for NO_x emissions and 1.34 for PN emissions (**Tab. 5-3**).

Emission limits for light commercial (N1) vehicles class I are identical to passenger car limits listed in Tab. 5-1. N1 class II and N1 class III emission limits are not listed here.

All emission levels as tested in the New European Drive Cycle (NEDC). Emissions levels in real-world driving may differ from the test cycle values. **CO**: Carbon monoxide; **HC**: Hydrocarbon; **NMHC**: Nonmethane hydrocarbon; **NO_x**: Nitrogen oxides; **HC+NO_x**: Hydrocarbon and nitrogen oxides; **PM**: Particulate matter; **PN**: Particulate number

Tab. 5-2

RDE timeline and conformity factors

Implementation of the Real Driving Emissions (RDE) on-road test procedure

Vehicle class		Euro 6d-TEMP	Euro 6d
Passenger cars (M1) and small light commercial vehicles (N1 CL 1)	New types	Sep 1 st 2017	Jan 1 st 2020
	All vehicles	Sep 1 st 2019	Jan 1 st 2021
Other light commercial vehicles (N1 CL 2, 3 and N2)	New types	Sep 1 st 2018	Jan 1 st 2021
	All vehicles	Sep 1 st 2020	Jan 1 st 2022

Not-to-exceed (NTE) emission limits of an RDE test result for the entire trip and the urban part alone

$$\text{NTE}_{\text{pollutant}} = \text{CF}_{\text{pollutant}} \times \text{EURO 6}_{\text{pollutant limit}}$$

Conformity Factor (CF)

Pollutant	Mass of oxides of nitrogen (NO _x)	Number of particles (PN)	Mass of carbon monoxide (CO)
Temporary CF Euro 6d-TEMP	2.1	1 + margin PN, with margin = 0.5	no on-road limit/ only measured
Final CF Euro 6d	1 + margin, with margin = 0.43	1 + margin PN, with margin = 0.5	no on-road limit/ only measured
PEMS margin Euro 6e	1.1	1.34	no on-road limit/ only measured

Implementation of the Euro 6e standard for new vehicles

		Euro 6e	Euro 6e-bis	Euro 6e-bis-FCM
Applies to all category M1, N1 and N2 vehicles covered by the light-duty vehicle regulation	New type approvals	1.9.2023	1.1.2025	1.1.2027
Applies to all category M1, N1 and N2 vehicles covered by the light-duty vehicle regulation	New vehicles	1.9.2024	1.1.2026	1.1.2028

Tab. 5-3

Timeline for introduction of Euro 6e emission standard

Remarks on data sources

The basis for the statistics shown in this report is a database compiled by the ICCT. It includes technical information, emission levels, and registration volumes at a vehicle variant level. Sources of information include data obtained by the European Environmental Agency (EEA) on behalf of the European Commission, the European Automobile Manufacturers' Association (ACEA), the German Kraftfahrtbundesamt (KBA), the Netherlands Vehicle Authority (RDW), the United Kingdom Vehicle Certification Agency (VCA), Allgemeiner Deutscher Automobil-Club (ADAC), Automobil Revue, Dataforce, IHS Markit, km77.com, China EV100 and ZEDATA (China), Atlas Public Policy (United States), Segment Y (India), vehicle manufacturers and importers associations, and information provided directly by manufacturers and suppliers. Data included in this publication are aggregated to a great extent and are only intended to illustrate high-level trends. It is not to be considered official data. Due to the introduction of the new WLTP test procedure, NEDC CO₂ values are not available for all 2020 new passenger car registrations in the EU. Figures shown make use of available NEDC and WLTP-based NEDC CO₂ values and may deviate from other publications.

List of figures

Fig. 1-1 Share of battery electric and plug-in hybrid vehicle models among all new light duty vehicle registrations in Europe, China, the United States, and India	3	Fig. 2-9 Market shares of passenger cars, light commercial vehicles, and trucks and buses, 2022	15
Fig. 1-2 Fleet average CO ₂ emissions for the 4x2 long-haul tractor trailer segment for EU truck manufacturers, 2019-2021	5	Fig. 2-10 Top-selling passenger car models in EU-27, 2022	16
Fig. 1-3 Total publicly accessible charging points installed, by country, 2022-2023	6	Fig. 2-11 Top-selling light commercial vehicle models in EU-27, 2022	17
Fig. 2-1 Passenger cars: New registrations by country	11	Fig. 2-12 Trucks and buses over 3.5 tons: New registrations by country	18
Fig. 2-2 Passenger cars: New registrations by country	11	Fig. 2-13 Trucks and buses over 3.5 tons: New registrations by vehicle type	18
Fig. 2-3 Passenger cars: New registrations by vehicle segment	12	Fig. 2-14 Trucks over 7.5 tons: Categories covered and not covered by adopted CO ₂ standards, 2022	19
Fig. 2-4 Passenger cars: New registrations by vehicle segment	12	Fig. 2-15 Trucks over 7.5 tons: New registrations by manufacturer in the segments covered and not covered by adopted CO ₂ standards, 2022	19
Fig. 2-5 Passenger cars: New registrations by brand	13	Fig. 3-1 Passenger cars: CO ₂ emissions and market share by country, 2022	23
Fig. 2-6 Passenger cars: New registrations by brand	13	Fig. 3-2 Passenger cars: CO ₂ emissions and market share by brand, 2022	23
Tab. 2-1 Vehicle segment classification used for this report	14	Fig. 3-3 Passenger cars: CO ₂ emissions by country	24
Fig. 2-7 Light commercial vehicles: New registrations by country	14	Fig. 3-4 Passenger cars: CO ₂ emissions by brand	24
Fig. 2-8 Light commercial vehicles: New registrations by brand	15	Fig. 3-5 Passenger cars and light commercial vehicles: CO ₂ emissions by engine technology	25

Fig. 3-6	25	Fig. 4-7	34	Tab. 5-1	42
Passenger cars: CO ₂ emissions and technical parameters		Passenger cars: Market share of hybrid electric vehicles (excl. plug-in hybrid) by brand		EU emission limits for gasoline and diesel passenger cars	
Fig. 3-7	26	Fig. 4-8	34	Tab. 5-2	43
Light commercial vehicles: CO ₂ emissions by brand		Passenger cars: Market share of plug-in hybrid electric vehicles by brand		RDE timeline and conformity factors	
Fig. 3-8	26	Fig. 4-9	35	Tab. 5-3	43
Light commercial vehicles: CO ₂ emissions by country		Passenger cars: Market share of battery electric vehicles by brand		Timeline for introduction of Euro 6e emission standard	
Fig. 3-9	27	Fig. 4-10	35		
Passenger cars: CO ₂ emissions versus vehicle mass		Passenger cars: Market share of natural gas and petroleum gas vehicles (mono- and bivalent) by brand			
Fig. 3-10	27	Fig. 4-11	36		
Passenger cars: CO ₂ emissions versus engine power		Passenger cars: Market share of diesel vehicles by segment			
Fig. 4-1	31	Fig. 4-12	36		
Passenger cars: Market share of diesel vehicles by country		Light commercial vehicles: Market share of fuels by country, 2022			
Fig. 4-2	31	Fig. 4-13	37		
Passenger cars: Market share of hybrid electric vehicles (excl. plug-in hybrid) by country		Passenger cars: Engine power by country			
Fig. 4-3	32	Fig. 4-14	37		
Passenger cars: Market share of plug-in hybrid electric vehicles by country		Passenger cars: Engine power by brand			
Fig. 4-4	32	Fig. 4-15	38		
Passenger cars: Market share of battery electric vehicles by country		Passenger cars: Engine power by segment			
Fig. 4-5	33	Fig. 4-16	38		
Passenger cars: Market share of natural gas and petroleum gas vehicles (mono- and bivalent) by country		Passenger cars: Vehicle mass in running order by country			
Fig. 4-6	33	Fig. 4-17	39		
Passenger cars: Market share of diesel vehicles by brand		Passenger cars: Vehicle mass in running order by brand			
		Fig. 4-18	39		
		Passenger cars: Vehicle mass in running order by segment

Abbreviations

ACEA	Association des Constructeurs Européens d'Automobiles (European Automobile Manufacturers' Association)
ADAC	Allgemeiner Deutscher Automobil-Club
BEV	Battery electric vehicles
CF	Conformity factor
CO	Carbon monoxide
CO₂	Carbon dioxide
EEA	European Environment Agency
EU	European Union
EU-12/13	All 12/13 EU member states having joined the EU between 1995 and 2014
EU-27	All 27 EU member states
HC	Hydrocarbon
HEV	Hybrid electric vehicles
HDV	Heavy-duty vehicles
KBA	Kraftfahrtbundesamt
LCV	Light commercial vehicles
LDV	Light-duty vehicles
LPG	Liquefied petroleum gas
PC	Passenger cars
PHEV	Plug-in hybrid electric vehicles
NEDC	New European Driving Cycle
NMHC	Nonmethane hydrocarbon
NO_x	Nitrogen oxides
NTE	Not-to-exceed
OBFCM	On-board fuel consumption meter
PEMS	Portable emission measurement system
PM	Particulate matter
PN	Particulate number
RDE	Real driving emissions
RDW	Rijksdienst voor het Wegverkeer (Netherlands Vehicle Authority)
SUV	Sport utility vehicle
VCA	Vehicle Certification Agency
WLTP	Worldwide Harmonized Light Vehicles Test Procedure
